# MTS-5800 ETHERNET APPLICATION COURSE OVERVIEW:

---

## Course Overview:

The MTS-5800 Ethernet Application Training is a dynamic course designed to familiarize participants with the operation, functions, and Ethernet application of the MTS-5800 measuring instrument. The course is delivered through live demonstrations, allowing participants to observe the main operation and control steps directly on the instrument. Application sharing ensures that participants can easily follow along with the instructor. This comprehensive training equips participants with the knowledge and skills to operate the MTS-5800 effectively in the field, enabling efficient service activation and troubleshooting.

## Course Objectives:

**Upon completion of the course, participants will be able to understand:**

- Operate the MTS-5800 to conduct L2 or L3 tests
- Configure and load tests efficiently
- Start the Ethernet Application and perform traffic tests accurately
- Analyze and interpret measurement results effectively
- Create detailed test reports and utilize the file manager feature

## Target Audience:

**The MTS-5800 Ethernet Application Training course is designed for**

- Engineers and users working in the LAN and transport network field who wish to enhance their
- skills in service activation and troubleshooting.
- Beginners and experienced professionals.
